

Andrés Medina

Full Stack Developer — React & React Native · Industrial Engineer

Tucumán, Argentina · andres.medina.arg@gmail.com · +54 3816713512 · [linkedin.com/in/andres-medina-arg](https://www.linkedin.com/in/andres-medina-arg) · github.com/anmedina-arg · [portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer and Industrial Engineer, specialized in TypeScript and the React ecosystem, with hands-on experience in React, Next.js, React Native, Node.js, and SQL. AI-first developer, applying Spec-Driven Development (SDD) as part of a structured engineering workflow: defining specs and guiding agents toward consistent, maintainable implementations. Proactive, self-directed, and problem-solving oriented, with a fast learning curve. Strong focus on UX, responsive design, accessibility, and performance, combining technical quality with a holistic product vision.

TECHNICAL SKILLS

- **AI-Assisted Development:** Claude Code, Cursor, Model Context Protocol (MCP), Agent Skills, Spec-Driven Development (SDD), prompt engineering
- **Frontend:** TypeScript/JavaScript, React, Next.js, React Query, Zustand, Redux, HTML5, CSS3, MUI, Styled-Components, Tailwind CSS, shadcn/ui, Storybook
- **Mobile:** React Native, Expo
- **Backend & Data:** Node.js, Express, Prisma, Sequelize, PostgreSQL, Supabase
- **Additional stacks (AI-agent assisted):** Laravel/PHP, Java, XML (NetIQ Identity Manager)
- **Other Tools:** Figma, Scrum, Git/GitHub, Jira

CERTIFICATIONS

Anthropic Education:

- Claude Code 101 — 09/07/2026
- Claude Code in Action — 05/31/2026
- Building with the Claude API — 05/29/2026
- Introduction to Model Context Protocol (MCP) — 05/25/2026
- Introduction to Agent Skills — 05/18/2026

PROFESSIONAL EXPERIENCE

Freelance — Fullstack Developer Jan 2023 – Present

Active projects:

Chaskyapp Aug 2025 – Present

- Built and maintain a WhatsApp-ordering commerce platform end-to-end: a mobile-first public catalog with cart and a recommendation engine — since most customers place their order from their phone — plus an admin panel covering orders, inventory, sales, product rankings, and exportable reports. In production with two brands (Market del Cevil, since March 2026; Yo Heladerías, since August 2026).
- Evolving the product from a single-store app into a multi-tenant SaaS platform, designing a per-client feature-flag architecture.
- Follow a Spec-Driven Development (SDD) workflow: before implementing, I document domain context, specs, and architecture decisions (13+ ADRs), so AI coding agents (Claude Code) work from a clear foundation — the result is maintainable software, not code generated blindly. Sustain velocity, code quality, and automated test coverage.

Stack: Next.js 15, React 19, TypeScript, Supabase, Zustand, TanStack Query, Tailwind CSS, Zod, Vitest, Recharts.

Rapitrango — Client: Cumbre-tech Jun 2026 – Present

- Beverage delivery platform in Argentina made of four connected products — customer, store and driver mobile apps (React Native/Expo) and the admin/backend panel (Laravel) — working across all of them.
- On the Laravel backend applied transferable software engineering principles and an AI-agent-assisted workflow (Claude Code) to get productive fast, researching and resolving issues independently. Maintained strong delivery speed and code quality on both fronts.

Stack: React Native, Expo, Expo Router, Zustand, Laravel 11, PHP.

Reforest — Client: Satory *Oct 2025 – Present*

- Sole developer of a custom production-management system for a forestry-sector client (genetically improved seed production), used daily by 10 people: genetic-material traceability, quality trials, lab inventory control, and reforestation project planning. Role-based access control (4 roles) backed by Row Level Security and 48+ versioned SQL migrations.
- Same Spec-Driven Development (SDD) workflow: requirements gathering, specs, and a domain glossary before implementing.
- Beyond development, act as the main point of contact for requirements gathering, business analysis, and client advisory.

Stack: Next.js 16, React 19, Supabase, shadcn/ui, TanStack Table, Zod.

Earlier Freelance Projects — CABSA · Kurve · CoolCo · Apes International *2023 (delivered)*

- Designed and built fully responsive websites and landing pages from Figma designs: a progressive site with blog (CABSA), a full company site (Kurve), a landing page with routing for ticket and NFT sales (CoolCo), and a video landing page (Apes International).

Stack: Next.js, TypeScript, React, Styled-Components, MaterialUI, CSS.

Instructor, Fullstack Development — Academia Desafío Latam *Apr 2024 – Present (currently not assigned to cohorts)*

- Delivered hands-on classes and theory sessions for the full-stack development program, as instructor and teaching assistant: 4 cohorts, ~240 students across Latin America. Gave the masterclass "Micro diseño para desarrolladores web" (micro design for web developers).

Stack: HTML5, CSS3, JavaScript, React, Node, Express, SQL.

Contractor — Plug-Zone *Nov 2023 – Jan 2026*

- Started on frontend for a transportation-logistics, billing, and customer-service web application integrated with an SAP backend.
- Grew the role's scope on my own initiative: took on backend, architecture, and DevOps/database work that wasn't part of the original contract.
- Independently trained as an IAM solutions implementer (NetIQ Identity Manager): built application-to-application drivers/connectors in Java and XML, and workflows with Formio.io.

Stack: TypeScript, Next.js, React, React Query, Zustand, MaterialUI, Java, XML, NetIQ IdM, Formio.io. Team: SCRUM.

ADDITIONAL EXPERIENCE (2022–2023)

Fullstack Developer — Virtual Remote Partner *(Sep – Dec 2023)*: Implemented Odoo ERP for multiple businesses and maintained client websites. *(JavaScript, Python, XML, React, MySQL, WordPress)*

Fullstack Developer — Aythen *(Sep – Nov 2023)*: Built a no-code website creation and editing platform. *(Next.js, Redux Toolkit, Sequelize)*

Frontend Developer & Technical Mentor — DIUM *(Jul 2022 – Sep 2023)*: Auto-parts e-commerce platform; led adoption of Storybook, Tailwind CSS, and Next.js. *(TypeScript, React, Next.js)*

Fullstack Developer — Totono (GetDeli) *(Sep 2022 – Apr 2023)*: Built an e-commerce platform as part of a team. *(TypeScript, React, Prisma, Sequelize)*

Full Stack Web Developer — Henry Bootcamp *(May – Jul 2022)*: Countries App (SPA with search, filtering, and CRUD) and Davo's Shoes (e-commerce), team training projects.

PRIOR EXPERIENCE

Process Engineer — Grupo Arcor — Misky, Tucumán *May 2013 – May 2022*

- Continuous-improvement lead for the plant (focused-improvement pillar, TPM): coordinated all improvement teams and led teams of ~10 people, applying the 7-step TPM methodology.
- Raised a production line's efficiency from 88% to 93%; commissioned a complete line relocated from another plant and brought it to 80% efficiency.
- Implemented the performance review system for ~300 people in the production pillar.
- Planned production shifts based on demand using Just-In-Time methodology; performed statistical process analysis on production processes.

EDUCATION

- Full Stack Web Developer — Henry Bootcamp. 700-hour theoretical and practical program. 2022.
- Industrial Engineer — National University of Tucumán. 2004 – 2012.
- Electromechanical Technician — ITS Lorenzo Massa (high school).

LANGUAGES

- Spanish — Native
- English — C1 (Advanced)
